

7818EH 3M TT5 MS PET 75-310E-90WG

Thermal Transfer Polyester Label Material

Product Data Sheet

Issued : June 2004
Supersedes : May 2003

Physical Properties
Not for specification purposes
(Calipers are nominal values)

| | |
|-------------------|---|
| Facestock | 80 Micron Matte Silver polyester |
| Adhesive | 20 micron #310 E Acrylic |
| Liner | 77 micron, 90 g/m ² White Densified Glassine |
| Shelf Life | 24 months from date of manufacture of product when properly stored at 22°C and 50% relative humidity. |

Features:

- TT5 Matte topcoat provides a smooth matte surface, giving excellent thermal transfer images at reduced burn temperature settings, resin ribbons are recommended for optimum durability. The matte coating is extremely resistant to degradation from scuffing, chemicals, moisture, and wide temperature fluctuations. The topcoat also provides improved ink anchorage for traditional forms of press printing.
- 310 E is a firm adhesive, which resists oozing and provides high strength on a variety of surfaces including high surface energy (HSE) plastics and metals. It additionally has improved chemical and U.V resistance.
- 90 g/m² densified glassine liner assures consistent die cutting.
- 3M™ Label Material 7818 EH is UL and cUL Listed (File No. MH18072)

Application Ideas:

- Barcode labels and rating plates.
 - Property identification and asset labelling.
 - Warning, instruction, and service labels for durable goods.
 - Nameplates for durable, electronic and sporting goods.
-

| | | | | | |
|---|--|--------------|-----------------|-------------------|-------------------------|
| Environmental Performance | The properties defined are based on four hour immersions at room temperature 22°C unless otherwise noted. Samples were applied to stainless steel panels 24 hours prior to immersion and were evaluated one hour after removal from the solution for peel adhesion. Adhesion measured at 90° peel angle (FTM 2 at 305 mm/min). | | | | |
| Chemical Resistance | Adhesion to Stainless Steel | | | Appearance | Edge Penetration |
| Chemical | N/10mm | Oz/In | % Change | Visual | Millimetres |
| Isopropyl Alcohol | 5.4 | 49 | 90 | No change | 1 |
| Detergent (1% Alconox®*) | 5.5 | 51 | 104 | No change | 1 |
| Engine Oil (10W30) @ 250°F (121°C) | 5.7 | 52 | 106 | No change | 1 |
| Water for 48 hours | 5.7 | 52 | 106 | No change | 0 |
| pH 4 | 5.8 | 53 | 107 | No change | 0 |

| | | |
|-------------------------------|---|--|
| Temperature Resistance | 149°C for 24 hours: | no significant visual change 0.7% MD shrinkage 0.9% CD shrinkage |
| | -40°C for 3 days: | no significant visual change |
| Humidity Resistance | 24 hours at 38°C and 100% relative humidity | no significant changes in appearance or adhesion |

Agency Listing Information

Thermal Transfer Printing:

UL and cUL approved with the following ribbons

Armor: AXR 7+; AXR 8; AXR 600
Ricoh™: B110CX; B110CR; B120EC
Sony™: TR4070; TR5070; TR4570
Astromed: RY
Zebra: 4800, 5095, 5100

Processing

Printing:

Facestock is topcoated for improved ink receptivity and is designed for thermal transfer printing. It is printable by all standard roll-processing methods including flexography, hot stamp, letterpress, and screen-printing.

Die Cutting:

Rotary die cutting is recommended. Fanfolding of labels is not recommended. Small labels should be evaluated carefully. Winding tensions should be kept at a minimum to help prevent the adhesive from oozing.

Packaging:

Finished labels should be stored in plastic bags.

Special Considerations

For maximum bond strength, the surface should be clean and dry. Typical cleaning solvents are heptane and isopropyl alcohol.

NOTE: When using solvents, read and follow the manufacturer's precautions and directions for use.

For best bonding conditions, application surface should be at room temperature or higher. Low temperature surfaces, below 5°C can cause the adhesive to become so firm that it will not develop maximum contact with the substrate. Higher initial bonds can be achieved through increased rubdown pressure.
